

## Thinking *inside* the box.

It may look like an ordinary box. But inside **The Insurance Research Lab for Better Homes**, there's groundbreaking research going on. The research facility, the only one of its kind in the world, is the brainchild of University of Western Ontario's Faculty of Engineering. It can simulate winds of up to 320 km/h, allowing researchers to develop and test new methods of constructing homes that are more resilient in extreme weather. Canada's home, car and business insurers are proud to provide financial support.
